### IS YOUR MICROPHONE WATERPROOF?

Look for the **W** (Waterproof) as part of the model number on the white tag located near the end of the mic cable.

"W" indicates Waterproof

Sound waves cannot pass through water so you must clear whatever is blocking the mic aperture by gently shaking out the water and allowing the microphone to air dry.

### Water & Windscreens

Windscreens are highly recommended in heavy water usage where it is expected that water will very likely flood the aperture.

Model #: 6-WSNr  
Foam Windscreens

## CUSTOMIZING YOUR HEADSET

1

Turn ear hook into upright position to snap lock in place.

2

Slide headband on both sides to adjust for a proper fit.

3

Lock the boom in place using the S-Hook

4

Bend cable on the boom side to avoid cable stress.

5

Attach cable to the clip and secure to an area near the neck.

## TWO Mics for the Size of ONE

The headset microphone's patent pending design offers built-in microphone redundancy with the convenience of a single cable. The elements are factory matched to a near identical  $\pm 0.5$  dB difference – and both elements are waterproof. The mic elements are offset to reduce mass and effectuate a sleek profile.

## CABLE CARE

Use care when storing your microphone; coil the cable so that it rests flat.

**DO NOT** wrap the cable around the body pack or coil the cable in any way that creates serious bends or strain on the cable.
